

YipTel TeleHealth - HIPAA Compliant Voice, Video & Fax

Personal Patient TeleHealth Visits to and from Virtually Anywhere

SIMPLE AND SECURE

YipTel TeleHealth delivers the easiest and fastest way to connect medical professionals to their patients. We provide simple and secure face-to-face interactions with your patients in a HIPAA compliant environment.

Virtual consultations are a new and innovative way for health systems to enhance their brand, expand their services and provide the right care anytime, anywhere.

PATIENT BENEFITS

Fast & Easy Access | YipTel TeleHealth can allow you to provide a new level of access to care that is accessible from virtually anywhere at any time.

Patient Satisfaction | TeleHealth patients express significantly higher satisfaction with their provider when remote TeleHealth is provided.

Better Access to Care | Patients can reduce drive times and eliminate limitations that come from an inability to get access to care.

PROVIDER BENEFITS

Improve Patient Care | YipTel TeleHealth improves the quality and speed of care and thus delivers increased patient satisfaction.

Grow Your Practice | YipTel TeleHealth will allow you to attract new patients to your practice due to the ease and convenience of care. You can also expand your geographic footprint and attract patients from virtually anywhere.

Increased Revenue | Increase patient visits with safe and reliable Video TeleHealth patient interactions. Free up exam rooms and office staff while shifting routine encounters into shorter visits, either by phone or online video.

Cost Effective | There is no equipment to buy, manage or maintain. YipTel TeleHealth is provided for one low monthly rate that is all-inclusive. Enjoy time and productivity savings as well as a virtually immediate ROI.

USES AND APPLICATIONS

Rural Health Care

YipTel TeleHealth can extend your services to virtually anywhere! They are accessible via devices that your patients already use such as their smartphones. This provides rural patients access to specialists and increases the speed while reducing the cost of providing care.

Home Health

YipTel Home Health facilities are using TeleHealth to reduce readmissions, modify medications and deliver immediate access to provider services.

Assisted Living

YipTel TeleHealth delivers video access to family members in long-term care facilities. It provides the care center with access to a host of outside provider services and care options.

Mental Health/Telepsychiatry

YipTel Telepsychiatry provides personal, face-to-face interactions. Counseling and therapy sessions can now be provided to your patients wherever they may be. This provides a safe and comfortable environment for your patients and eliminates the stress and complications of traveling to and from the office to receive care.

Hospitals and Remote Care

Hospitals can now deliver a host of Telehealth Care options including: Wound Care, Psychiatry, Endocrinology, Rheumatology, Osteoporosis treatment, Dermatology, Neurology, Mental Health, and more. In addition, they can leverage the technology for training and access to specialists.

Just like the electronic medical record is becoming the de facto standard for managing patients' health information, TeleHealth will inevitably become the commonly available means to deliver timely and high-quality care to patients where they need it, when they need it.

HandsOnTeleHealth.com

South Carolina Department of Mental Health improves patient adherence to psychiatric treatment by nearly 200%, reduces rehospitalizations, and saves taxpayers \$21.7 million with Telepsychiatry.

Polycom Press Release

Forbes contributor Bruce Japsen recently interviewed an analyst at another market research firm, IHS, who predicts that the U.S. TeleHealth market will grow to \$1.9 billion in 2018 from \$240 million today, an annual growth rate of 56 percent.
